

Jean FONDJO BEng MSc CEng MICE

Associate Director

PROFILE

Jean is a Chartered Civil and Structural Engineer (CEng) with more than 20 years' experience working in variety of fields in the engineering industry and provided technical and managerial leadership to design teams on several key projects in the United Kingdom and overseas. This includes both concrete and steel structures, permanent works and temporary works design, and erection engineering. Possessing significant technical problem solving, planning and management capabilities to successfully deliver projects.

CORE SKILLS

Wide breadth and depth knowledge and application of civil & structural engineering principles to formulate and develop structural design solutions to suit different environments – new builds, strengthening, refurbishment, renewals, demolition, Temporary Works, maintenance, and upgrades. Experienced at designing in a variety of construction materials including structural steel, reinforced concrete, masonry, and timber to international codes of practice and specifications including British Standards and Eurocodes. Experienced in design production, management and planning, organising resources and budgets to meet Client's requirements.

- Eurocodes: EC1, EC2, EC3, EC5, EC6, EC7
- BS5975:2019+A1:2011, CDM 2015, Principal Designer and Designer Duties
- Infrastructure & Non-Infrastructure water framework projects
- Temporary Works Design (Above & Below ground)
- Principle of Construction Contracts and Law
- Engineering Description of Soil and Rock to BS 5930 in accordance with EC7
- Ground Support Systems - Deep Excavations, Working in Confined Space
- Contract Management
- Geotechnical slope and embankment design / EUSR & CSCS Qualified Person Card
- CITB SMSTS (Site Management Safety Training Scheme) Certificate
- Health & Safety Management
- Bridgeworks and associated structures
- Earth retaining structure
- Finite Element Analysis (FEA) / Civil 3D / BIM (Building Information Modelling) / MIDAS Civil
- Bridge foundations including design of piled foundations, reinforced earth foundations and bankseats
- Underground structures

PROFESSIONAL EXPERIENCE

❖ TIFAND LIMITED — *(April 2021 – Present)*

Associate Director

- Design Lead of temporary works designs on major and high-risk schemes including permanent works designs assessment
- Overseeing technical delivery of temporary works design packages from concept through to construction
- Driving innovation, buildability and best practice within the design team
- Providing technical expertise to clients in preparing Pre-construction information and design
- Supporting the strategic growth and development of the in-house design capability
- Producing structural appraisals, asset mitigation reports and monitoring plans

❖ MORRISON UTILITIES SERVICES (MUS) — *(June 2018 – February 2021)*

Principal Temporary Works Engineer

Area based Principal Civil/Temporary Works Engineer responsible in the delivery of design, management and co-ordination of all Temporary Works activities, covering East Midlands & East Anglia on tRIIO contract. I was responsible for managing the temporary work interfaces between tRIIO and the supply chain.

❖ RPS GROUP — *(January 2015 – April 2018)*

Senior Civil & Structural Design Engineer

Responsible for various projects (Civil & Structural, Temporary works and third-party CAT 3 independent checking); responsibilities include preparation, production and checking of detailed designs and calculations, drawings, and risk assessments.

New A14 Cambridge - Huntingdon Improvement Scheme: Temporary Formworks design for BN06 Rail Bridge Abutment and Wing Walls construction over the East Coast Mainline:

Structural analysis and detailed design of the following schemes:

- £40m Exeter St Devis Train Station New Depot and offices
- £6m Prologis Depot, Plot 4 London Medway Commercial Park
- £20m Amazon Distribution Centre, Plot 1A London Medway Commercial Park

❖ **COSTAIN SKANSKA JOINT VENTURE (CSJV) C405 – Crossrail Paddington Station Project — (June 2016 – December 2016)**

Temporary Works Design Manager

Temporary Works Design Manager providing day-to-day Temporary Works management including Temporary Works' Register daily update, Design briefs, checking and approval of detailed designs and drawings from Sub-Contractors, Risk Assessments and method statements, specifications, and guidance for design implementation, issuing of Permits (load/strike/dismantle). The contract was valued at around £150 million and was the fourth Crossrail scheme.

❖ **AMEC FOSTER WHEELER (Power T&D) — (March 2014 – May 2016)**

Civil / Structural & Temporary Works Engineer

- [Resident Civil/TW Engineer in Scotland](#), for the South the West Scotland (SWS) 400 kV OHL construction Project: responsible for the production and coordination of Civil, Structural & TW detailed designs and calculations, checking and approval of detailed drawings. Provision/checking of design briefs, method statements, specifications and guidance for design implementation, supervision of civil and Temporary works construction of new 54km haul roads, 223 new towers with foundations, 44 crossing structures, substations, and maintenance buildings.
- [Lead Design Engineer](#) for Scottish and Southern Energy (SSE) Crossaig - Carradale 132 kV OHL: responsible for the production and coordination of Civil, TW & Structural detailed designs and calculations; checking and approval of detailed drawings for access roads, 4 crossing structures comprised within a 4.5km new substation access road including 2 culverts, 2 bridges together with a RC pavements and slabs, offices and maintenance buildings.

❖ **ASPIN CONSULTING — (July 2013 – February 2014)**

Civil & Structural Design Engineer

Responsible for production, checking and approving designs of various Rail infrastructures projects; Site visit for structural inspections of rail structures e.g. bridges, retaining walls and station buildings; production of structural reports appraisals and detailed drawings.

Projects include:

- Cardiff re-signalling: Signal Non-Climbable Two Tracks cantilever posts.
- Walsall Cannock re-signalling: signal post platforms and signal portal gantries.
- Nursling 400kV Substation: piled foundations for circuit breakers, disconnectors, earth switch support and post insulators
- Stella West 275kV/400kV substation flood defence concrete retaining walls

❖ AMEY Plc — *(January 2013 – June 2014)*

Civil & Structural Design Engineer

Detailed Examinations Review (DER) Project of Network Rail

Assisted the project in the implementation requirements to meet the client specification in accordance with Network Rail standards; Revision of the technical management decisions and recommendations made in the (Rail Bridges) structural examination reports; Inspection of Hidden Critical Element defects on Bridge structures, identification of subordinate hazards and highlighting the escalating major safety concerns to QA Team.

Produced report reviews and supplementary documents that support the Service. Production of investigations, reports and specifications. Ensured activity is in compliance with relevant technical, professional and group standards. Ensured project change is fully managed, implemented and recorded. Ensured work is undertaken using formal processes and procedures. Managed and record time and provide time estimates for projects/packages. Define and manage change to scope of work.

Responsible for production, checking and approving designs of various Rail infrastructures projects; Site visit for structural inspections of rail structures e.g. bridges, retaining walls and station buildings; production of structural reports appraisals and detailed drawings.

❖ FLUOR Ltd — *(October 2011 – January 2013)*

Civil & Structural Design Engineer

\$20bn Simandou Iron Ore Project in Guinea, Africa [Client: Rio Tinto]. Worked in this multi-disciplinary, EPC project providing Civil & Structural engineering consultancy service:

- Responsible within the CSA team, for mining non-process facilities and airfield infrastructures providing Civil and Structural detailed design and calculations for infrastructures e.g. camps (Helipads, Fuel and water storages).
- Led and managed a team of 6 Engineers and technicians in Guinea for structural inspection of more than 100 bridges.
- Member of Fluor 4 individuals commissioning team to Guinea that liaised with the Ministry of Mines and Transports, to carried out Tenderers (Guinea local construction companies) technical bid evaluation with regard of awarding construction contracts for various roads and bridges construction.
- Production of structural detailed designs for both Faranah and Bela Airports's Terminal buildings, camps' residential and commercial buildings including warehouses, workshops and site offices. Structural condition surveys of the two Airports' runways for upgrade/rehabilitation.
- Preparation, production and checking of feasibility studies, technical reports and other written documents in an appropriate format ensuring compliance with Fluor procedures.
- Preparation of civil /structural engineering deliverables, man-hours, Technical Bid evaluation (TBE) and Material Take off (MTO).

Graduate Civil & Structural Design Engineer

Related responsibility included:

- Liaisons with clients, project managers, architects, quantity surveyors, building services engineers. Specified and arranged specialist site investigations and drainage surveys and produced technical reports and presentations.
- Preparation and production of structural calculations and detailed drawings and elaboration of scope of works, building specifications, Risk Assessments, and contract documentations.
- Supervision and monitoring of the progress and quality of site work and solving technical site issues; Checking and approving structural calculations submitted to Building Control for Building Regulations compliance.
- Arrangement of demolition works including disconnections of utility supplies, programming asbestos surveys, party wall surveys, submitting details for planning and building control approval ensuring health and safety method statements are in place.

Projects as responsible Structural Design Engineer ranged from £0.5m - £3m and included:

- Alderman Richard Hallam School Phase 3 Children's Centre (design & build project)
- Eyres Monsell Infant & Junior School (Extension & refurbishment project)
- New Parks Library (design & build project)
- New Parks Youth Centre (Extension & refurbishment project)
- Upland Infant School Mobile Replacement Programme (design & build project)
- Humberstone Road Retaining wall (design & build project)
- Willowbrook Primary School (Extension & refurbishment project)

EDUCATION & TRAINING

- Master of Science (MSc) Civil & Structural Engineering – Coventry University (2012)
- BSc (Bachelor of Science) Civil & Structural Engineering – Coventry University (2008)

LANGUAGES

- Fluent English
- Fluent French

HOBBIES AND INTEREST

Football
